

4MM ALUMINIUM GUTTER GUARD PRODUCT SPECIFICATION SHEET

PRODUCT DESCRIPTION

Blue Mountain Mesh 4mm aluminium gutter guard is designed to prevent leaves and debris from entering gutters and downpipes. Particularly suited to situations where a building has native trees, like gums nearby that drop not just leaves but also nuts; the aperture of Blue Mountain Mesh 4mm aluminium gutter guard, assists in minimising the entry of leaves and gum nuts into a buildings gutters.

The aluminium, non-combustible mesh gutter guard minimises gutter maintenance and improves the quality of rain water collected for tanks.

HOW IT WORKS

The Blue Mountain Mesh over-the-gutter, ski-slope design, system forms a physical barrier to prevent leaves and debris from entering gutters. The mesh fits from the outside edge of the gutter across the gutter section and then is attached to the roof surface. This creates a platform that suspends leaves and debris above the roof gutter, allowing the majority of material build-up to be blown away by wind action. Blue Mountain Mesh over-the-gutter gutter protection systems offer year round low-maintenance protection that keeps gutters from getting blocked, preventing flooding of eaves, ceiling and wall cavities; and extra protection from hail and flooding rains during storms.

FEATURES AND BENEFITS

- + Flexible, ready-made gutter solution
- + Available in the popular COLORBOND® steel range colours
- + Suits only corrugated, tile and Trimdek® or Monoclad® roof types
- + Colour screws match the most popular COLORBOND® steel range colours and comply with AS2331.1 and Surefastener Certification Scheme technical specification
- + Easy to install
- + Designed to shed leaves and debris whilst allowing sunlight and wind into the gutter so it dries out quickly after rain.

COMPLIANCE

- + Conforms to the Australian Standard for the Construction of buildings in bushfire prone areas (AS 3959-2009)
- + Non-combustible material as per AS3959-2009 (CSIRO assessed)
- + Colour coded screws comply to AS2331.1 and Surefastener Certification Scheme Technical Specification
- + Conforms to the Building Code of Australia (BCA 2009)

MAINTENANCE

No gutter guard system is completely maintenance free. From time to time, you will need to check your gutter guard for any debris caught on the edge of the mesh or saddles, including the valley mesh. If there is any build-up of sediment or fine debris inside the gutter, use a normal pressure hose to flush the debris through the mesh out of the gutters and down the downpipe. You should not remove the mesh whilst carrying out maintenance.

ORDERING

An online Ordering Tool is available at www.bluemountainmesh.com.au or call 1800 612 908. Alternatively you can fax your order to 07 3041 3588 or email to orders@therhgroup.com.au.
